Application of cutting-edge cryo-EM methodologies to study DNA replication and repair

Monday, July 3, 2023 3:10 PM (30 minutes)

Cryo Electron Microscopy (cryo-EM) has revolutionized structure biology, allowing direct visualization of entire molecular machines at atomic resolution. In this talk, I will outline some of the applications of single-particle cryo-EM analysis we use in the lab to investigate the structure and function of enzymes operating in human DNA replication and repair.

Presenter: DE BIASIO, Alfredo (KAUST, Kingdom of Saudi Arabia)

Session Classification: Session 2 Cryo-Electron Microscopy Chair: Rita De Zorzi (Università degli Studi di Trieste)
