The XAFS/XRF beamline at SESAME: opportunities for emerging countries and complementarity with the Elettra present and future instruments.

Monday, September 11, 2023 12:05 PM (25 minutes)

The XAFS/XRF beamline was the first beamline to enter the operational phase at SESAME in 2017. It is a highly demanded and highly productive beamline. It has received in kind support from Germany, UK, Italy and IAEA and allows to perform both x-ray absorption and x-ray fluorescence measurements over a wide photon energy range. Synergies with Elettra beamlines will be highlighted as well as the complementarities between ongoing development projects at the two facilities.
